**PrecisionTx - Precision Laser Treatment**

PrecisionTx - Precision Laser Treatment gives you a defined look without a surgical face-lift.

You can now enhance your look with a new one-time, one hour minimally invasive laser procedure in the comfort of your doctor’s office. PrecisionTx is a treatment that takes the laser energy right underneath your skin. This innovative technique is known to stimulate collagen production in the dermis which leads into improved skin elasticity, thickness and texture.

**FAQs**

**How does PrecisionTx treatment work?**

The treatment area is numbed and tiny incisions are made to fit a very small cannula with a laser fiber, about the size of the tip of a pen, underneath your skin. Thermally controlled laser energy is delivered to the treatment area to stimulate collagen production in the dermis.

**What does the treatment feel like?**

As the area is numbed with local anesthesia, there is minimal discomfort during the procedure. Like any other minimally invasive procedure, you may feel a light pressure during the treatment and some soreness afterwards, which will resolve rapidly. You will be able to return to your normal activities in a few days.

**How long does the treatment take?**

The treatment takes about one hour and it is performed in your doctor’s office.

**How often does the treatment need to be repeated?**

PrecisionTx is a one-time treatment and provides lasting results.
